ABSTRACT

The **"Udaan" project** is a charity donation website designed to transform the way individuals contribute to meaningful causes. This platform connects generous donors with reputable charities, facilitating a seamless and secure donation process. Key functionalities include user registration, charity listings, and tax deduction information, all aimed at enhancing the user experience. The website features a robust database that securely stores user profiles, charity details, and donation records, allowing users to create detailed accounts, upload necessary documents, and manage their contributions effortlessly. The development of this platform incorporates modern programming languages and frameworks, utilizing **HTML, CSS, JavaScript** for the front end, and **PHP with MySQL** for the back end. This combination ensures a responsive design that is accessible across various devices while maintaining high performance and security standards.

ACKNOWLEDGEMENT

We would like to express my special thanks of gratitude to Dr Deep Subhra Guha Roy for their able guidance and support in completing our project.

CHAPTER 1 INTRODUCTION

1.1 Overview

The "Udaan" project is a web-based application designed to enhance the charitable giving experience for both donors and nonprofit organizations. In a world increasingly driven by digital solutions, this platform serves as a comprehensive resource for managing donations, charity listings, and donor profiles. The primary goal is to create an intuitive interface that simplifies the donation process while improving the overall experience for users. Donors will be able to create detailed profiles that include their giving history, preferred causes, and communication preferences. The platform will enable users to browse various charities, filter options based on criteria such as cause, location, and donation type, ensuring that they can quickly find organizations that resonate with their values. This functionality is essential in helping individuals contribute effectively to causes they care about. In summary, this project aims to develop a comprehensive charity donation website that not only simplifies the giving process for donors but also enhances fundraising efficiency for charities. By integrating advanced features and utilizing modern web technologies, the platform aspires to become a leading solution in the online charitable sector.

1.2 Problem Definition

The challenges addressed by the "Udaan" project include:

- **Fragmented Donation Processes:** Many potential donors face difficulties in finding reputable charities and navigating the donation process.
- **Lack of Transparency:** Donors often lack information about how their contributions are utilized by charities.
- **Limited Engagement:** Charities struggle to maintain ongoing relationships with donors due to inadequate communication tools.

1.3 Overview of Report

This report outlines the development and implementation of the "Udaan" project, focusing on key aspects such as user experience and backend management.

Objectives:

- **To Develop an Intuitive User Interface:** Create a user-friendly interface that allows donors to navigate easily through available charities and submit donations without complications.
- **To Implement Robust Database Management:** Design a secure database system capable of storing comprehensive information about donors, charities, and donation records.

Technology Stack:

We utilized HTML, CSS, and JavaScript for the front end, while employing PHP and MySQL for backend development. The software used for development includes Sublime Text Editor, a cross-platform source code editor that supports multiple programming languages and markup languages.

Project Development:

- **HTML/CSS/JavaScript:** These technologies were employed to create a responsive design that ensures accessibility across various devices.
- **PHP:** As a popular server-side scripting language, PHP manages user requests and processes data securely.
- **MySQL:** This relational database management system stores user information and donation records efficiently.

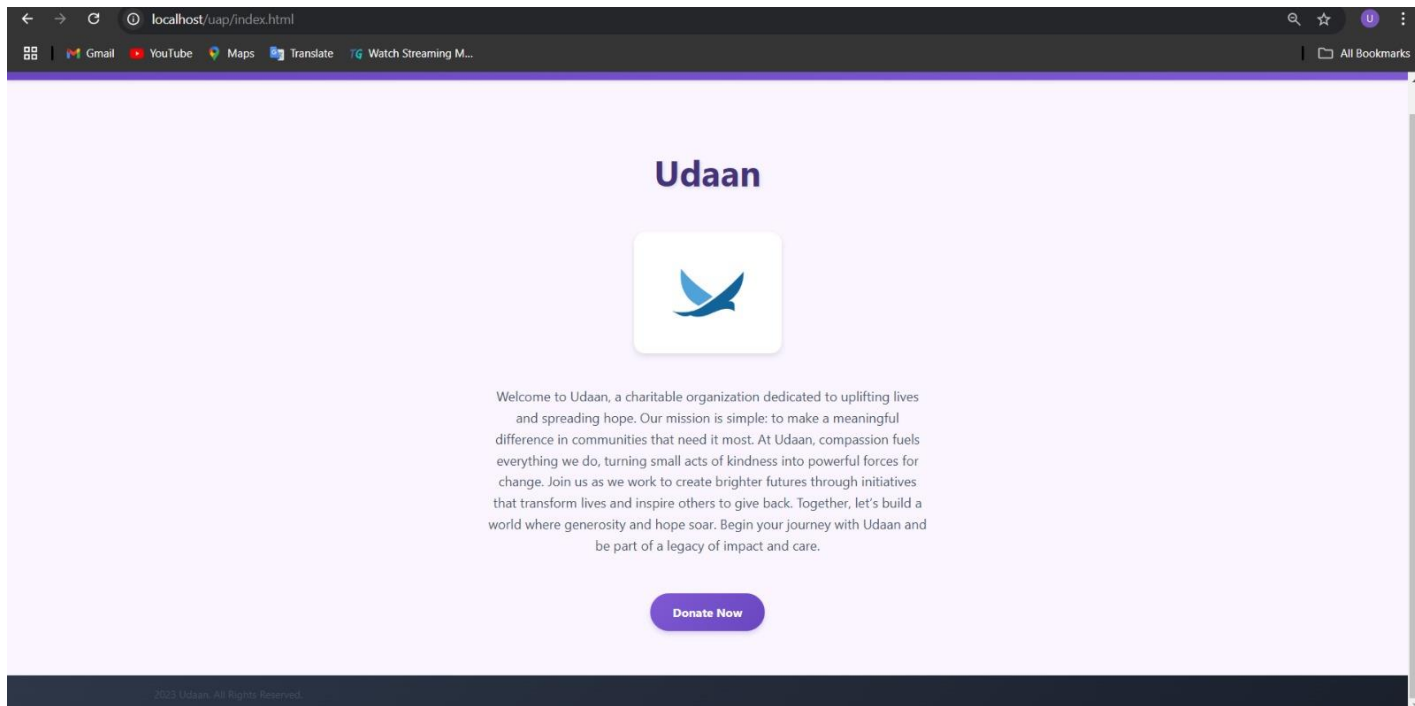

1.4 Organization of the Report

This project focuses on providing an accessible platform for charitable donations while ensuring transparency and engagement between donors and charities. The report is structured as follows:

- **Chapter 1:** This chapter introduces the project, outlining its objectives, overview, and problem statement.
- **Chapter 2:** This chapter includes a literature review that examines existing systems in the charitable sector, highlighting gaps that "Udaan" aims to fill.
- **Chapter 3:** This chapter details the system description, including architectural diagrams and flow diagrams illustrating user interactions.

- **Chapter 4:** This chapter covers theoretical analysis/project details of the technologies used in developing the platform.
- **Chapter 5:** This chapter outlines the methodology employed in developing the project.
- **Chapter 6:** This chapter presents results from user testing and feedback on the platform's functionality.
- **Chapter 7:** This chapter concludes the report with insights on future enhancements that can improve efficiency and add new features to the platform.
- **Chapter 8:** This chapter contains references used throughout the report.

By addressing these structured components, this report provides a comprehensive overview of the "Udaan" project's objectives, implementation strategies, and anticipated impact on charitable giving.

CHAPTER2: LITERATURE REVIEW

2.1 Introduction

The literature review is a crucial component of research, providing comprehensive information related to the problem and objectives of the study. It explores the antecedents of charitable giving, focusing on factors such as customer trust, service quality, and satisfaction in the context of online donation platforms. Understanding these elements is essential for enhancing donor retention and engagement in the digital age.

2.2 Existing Systems

2.2.1 The Role of Trust in Online Charitable Donations

A study by [Author/Source] explores how consumer trust impacts satisfaction and loyalty in digital businesses, emphasizing that trust is a critical factor in fostering long-term relationships between donors and charities. The research indicates that higher levels of trust lead to increased donor satisfaction and loyalty, which are vital for the sustainability of charitable organizations.

Problems Identified:

- Lack of transparency regarding how donations are utilized can erode trust among potential donors.
- Charities often struggle to communicate effectively with donors, leading to disengagement.

2.2.2 Customer Satisfaction in E-Charity Platforms

Research conducted by [Author/Source] highlights the importance of customer satisfaction in building trust within online donation platforms. The study suggests that personalized experiences significantly enhance donor satisfaction, which in turn fosters a loyal donor base.

Problems Identified:

- Many platforms fail to provide personalized experiences, resulting in decreased donor retention.
- Inadequate customer service can lead to dissatisfaction and reduced trust in the platform.

2.2.3 Transparency and Engagement in Digital Donations

According to Source , transparency is essential for building trust in digital services, including charitable donations. The study underscores that organizations must be clear about their operational practices, including how funds are allocated and the impact of donations.

Problems Identified:

- Insufficient communication regarding donation impacts can lead to donor scepticism.
- Charities often lack effective strategies for engaging with their donor community, hindering relationship building.

2.3 Summary of Findings

The literature indicates that trust, satisfaction, and transparency are pivotal for the success of online charity donation platforms. Addressing these issues through improved communication strategies, personalized experiences, and transparent practices can significantly enhance donor engagement and retention. The "Udaan" project aims to incorporate these insights into its design and operational strategies to foster a trustworthy and satisfying experience for all users involved in charitable giving.

About Us

Welcome to Udaan, where compassion meets convenience. We are more than just a website; we are a platform dedicated to connecting people with the power to make a difference. Our mission is to facilitate meaningful and impactful giving by providing a seamless and secure way for individuals to support their favorite charities and causes.

Our Purpose

At Udaan, we understand that the desire to give back to the community and support those in need is a fundamental aspect of the human spirit. We believe that everyone has the capacity to make a positive change in the world, regardless of their background or resources. That's why we have created a user-friendly and transparent platform that empowers you to donate to your favorite charities effortlessly.

Join Us in Creating Hope

At Udaan, we believe in the strength of collective action. By coming together and championing the causes that matter most to us, we can shape a brighter, more hopeful future for everyone. Join us on this journey of giving, where every donation, regardless of size, plays a part in making the world a better place. Your kindness holds the power to change lives, and we are here to help make that change a reality. Explore our website to connect with charities that resonate with you, and take the first step toward making a difference today. Together, we can bring hope to those in need and inspire lasting change for generations to come.

CHAPTER 3: SYSTEM DESCRIPTION

Systems are designed with specific issues in mind, addressing the unique requirements of the problem at hand. The "Udaan" project aims to solve the challenge of connecting donors with reputable charities, facilitating an efficient and transparent donation process.

System design involves creating an overall architecture that includes various components, modules, and interfaces. The architecture begins with decomposing the system into smaller, manageable fragments. This decomposition allows for easier understanding and development of the system. Our system employs algorithms for data collection that gather user information and analyse it to highlight user needs effectively.

3.2 Architectural Diagram

The architectural diagram below illustrates the structure of the "Udaan" project. It shows that both users (donors) and administrators need to register or log in to access the platform. The system consists of several modules, including:

- **User Registration/Login**
- **Charity Listings**
- **Donation Processing**
- **User Profiles**

All data is securely stored in a centralized database.

Fig 3.1 Architectural Diagram

3.3 Flow Diagram

The flow diagram provides a graphical representation of user interactions within the platform.

For users:

- Users request permission to log in.
- After logging in, users can browse charity listings.
- Users can select a charity to donate to and complete their donation.
- A confirmation of their donation is provided.

Fig 3.2 Flow Diagram for User

For administrators:

- Admins log in to their accounts.
- After authentication, admins can manage charity listings (add, edit, delete).
- Admins can view donation reports and user activity.

Fig 3.3 Flow Diagram for Admin

3.4 Working Principle

The "Udaan" project is a web application designed to facilitate charitable donations seamlessly. The main goal is to provide an easy-to-use platform for donors to contribute to causes they care about from the comfort of their homes. The web application features multiple sections on the homepage, allowing users to navigate easily through different functionalities:

- **Charity Listings:** Users can view various charities and their missions.
- **Donation Process:** Users select a charity, enter their donation amount, and proceed through a secure payment process.
- **User Support:** Contact information is readily available at the bottom of the homepage for any inquiries.

Users can create accounts where they can manage their donation history and preferences. After selecting a charity and entering their desired donation amount, users must log in to complete the transaction. Once logged in, they can choose their preferred payment method to finalize their donation.

Upon successful completion of a donation, an email confirmation is sent to the user, and the admin receives notification to process and acknowledge the contribution promptly.

This structured approach ensures that both donors and charities benefit from a streamlined process that enhances engagement and trust within the charitable community.

CHAPTER 4: THEORETICAL ANALYSIS

4.1 Introduction to Tools Used in Project

The "Udaan" project employs a variety of tools and technologies essential for developing a robust charity donation platform. These tools facilitate the creation of a user-friendly interface, efficient backend processing, and secure data management.

4.1.1 Introduction of HTML

Hypertext Markup Language (HTML) is the foundational markup language used to create web pages. It allows for the structuring of content on the web, enabling the presentation of text, images, and links in a coherent format. HTML documents are portable and can be rendered across different platforms and devices.

Advantages of HTML:

- Widely supported by all web browsers.
- Easy to learn and implement.
- Does not require additional software as it is built into all operating systems.

4.1.2 Introduction of CSS

Cascading Style Sheets (CSS) is a stylesheet language used to control the presentation of web pages. CSS enables developers to apply styles, layouts, and designs consistently across multiple pages, independent of the HTML structure.

Advantages of CSS:

- Promotes consistency in design across different web pages.
- Simplifies the process of applying different styles for various devices and screen sizes.

For example, a simple HTML form for user login might look like this:

html

Copy code

```
<!DOCTYPE html>
<html>
<head>
  <title>Login Form</title>
</head>
<body>
  <input type="text" placeholder="Email" name="email" id="email">
  <input type="password" placeholder="Password" name="password" id="password">
  <input type="submit" value="Login" name="submit" id="btn">
</body>
</html>
```

To style this form using CSS, you would include:

css

Copy code

```
<style>
  body {
    background-color: #f0f0f0;
  }
  #email, #password {
    width: 300px;
    height: 32px;
    border: 1px solid #ccc;
    margin-bottom: 10px;
  }
  #btn {
    width: 250px;
    background-color: orange;
    height: 35px;
```

```

        font-size: 20px;
    }
</style>

```

4.1.3 About PHP

PHP (Hypertext Preprocessor) is a widely-used server-side scripting language designed for web development but also suitable for general-purpose programming. PHP code is embedded within HTML and executed on the server, allowing for dynamic content generation.

4.1.4 PHP Syntax

PHP code is typically enclosed within `<?php ?>` tags within an HTML document:

```

html
Copy code
<html>
<head>
    <title>PHP Sample</title>
</head>
<body>
    <h2>Hello</h2>
    <?php
        echo "Hello from PHP!";
    ?>
</body>
</html>

```

This integration allows for seamless interaction between PHP and HTML.

4.1.5 Working with PHP

When a user requests a page containing PHP code, the server processes the PHP script before sending the resulting HTML back to the client's browser. This interaction allows for dynamic content generation based on user input or database queries.

4.1.6 Connecting PHP Application with MySQL Database

To connect a PHP application to a MySQL database, follow these steps:

- Create a connection variable:

```

php
Copy code
$conn = mysqli_connect("localhost", "username", "password", "database_name");

```

- Prepare an SQL query:

```

php
Copy code
$query = "SELECT * FROM donations";

```

- Execute the query:

```

php
Copy code
$result = mysqli_query($conn, $query);

```

- Iterate over the results:

```

php
Copy code
while ($row = mysqli_fetch_array($result)) {
    // Process each row
}

```

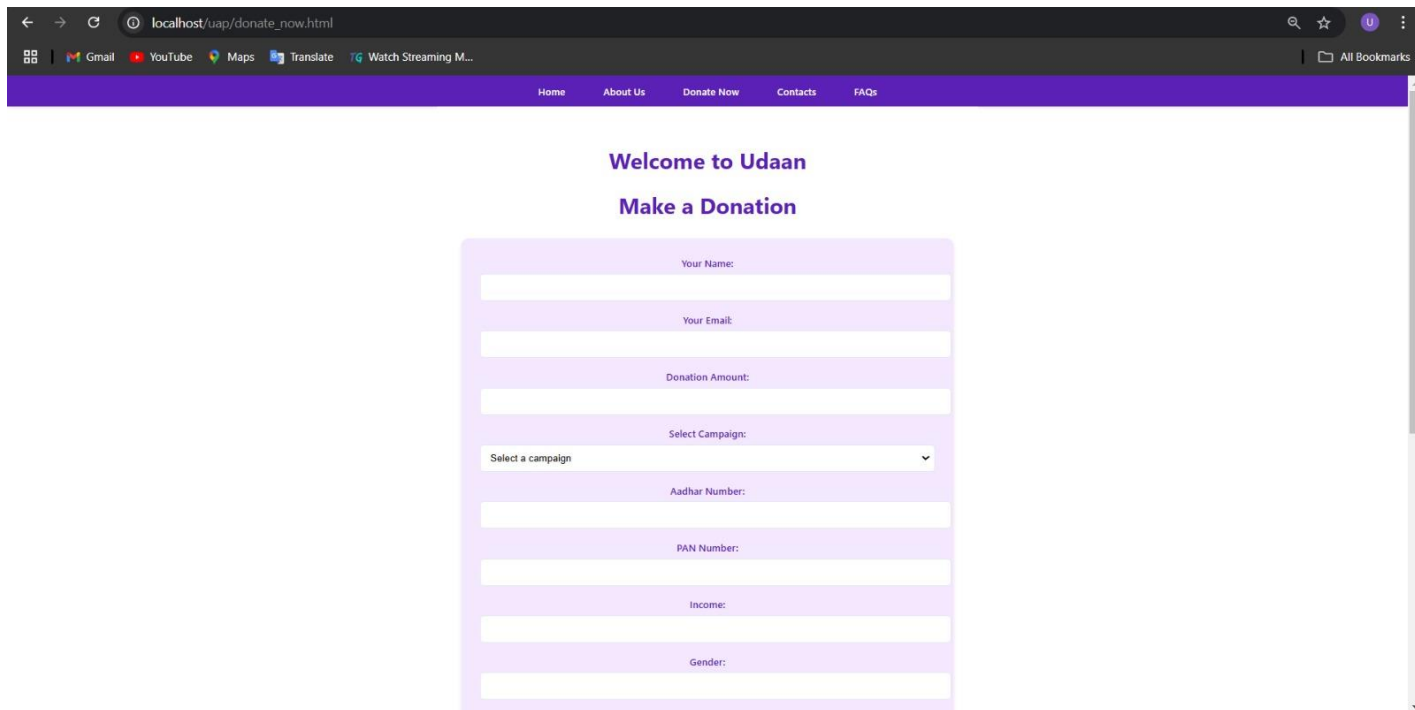

4.1.7 Introduction to MySQL

MySQL is a relational database management system (RDBMS) that provides multi-user access to databases. It is open-source and widely used for web applications due to its reliability and speed. MySQL supports various platforms and integrates seamlessly with many programming languages through APIs, making it an ideal choice for backend data management in web applications.

4.1.8 Introduction to Apache Server

The Apache HTTP Server is used in this project to serve PHP pages and manage client requests efficiently. Before

deploying the website live, it is crucial to test it locally using an Apache server setup configured to work with PHP. The Apache server processes incoming requests for web pages and executes any embedded PHP code before returning the final output to users.

CHAPTER 5: METHODOLOGY

5.1 Methodology

The methodology for the "Udaan" project outlines the systematic approach taken to develop the charity donation platform. This includes both the technical aspects of data management and user interaction features.

Data Management: User and charity data will be securely stored using a MySQL database, ensuring that all information is easily accessible and manageable by administrators.

Search Functionality: Users can efficiently search for charities and donation opportunities through an intuitive search option, enabling them to find causes that resonate with their interests.

Front-End Development: The front end of the application is developed using:

- **HTML:** For structuring the web pages.
- **CSS:** For styling and layout.
- **JavaScript:** To enhance interactivity and user experience.
- **Bootstrap:** A responsive framework that ensures the website is mobile-friendly and visually appealing.

Back-End Development: The back end of the application utilizes:

- **PHP:** As the server-side scripting language to handle user requests, process donations, and manage data interactions.
- **MySQL:** For database management, storing user profiles, donation records, and charity information.
- **Apache Server:** To serve PHP pages and manage client-server interactions.

Modules

1. ADMIN MODULE

The admin module provides various functionalities for managing the platform effectively:

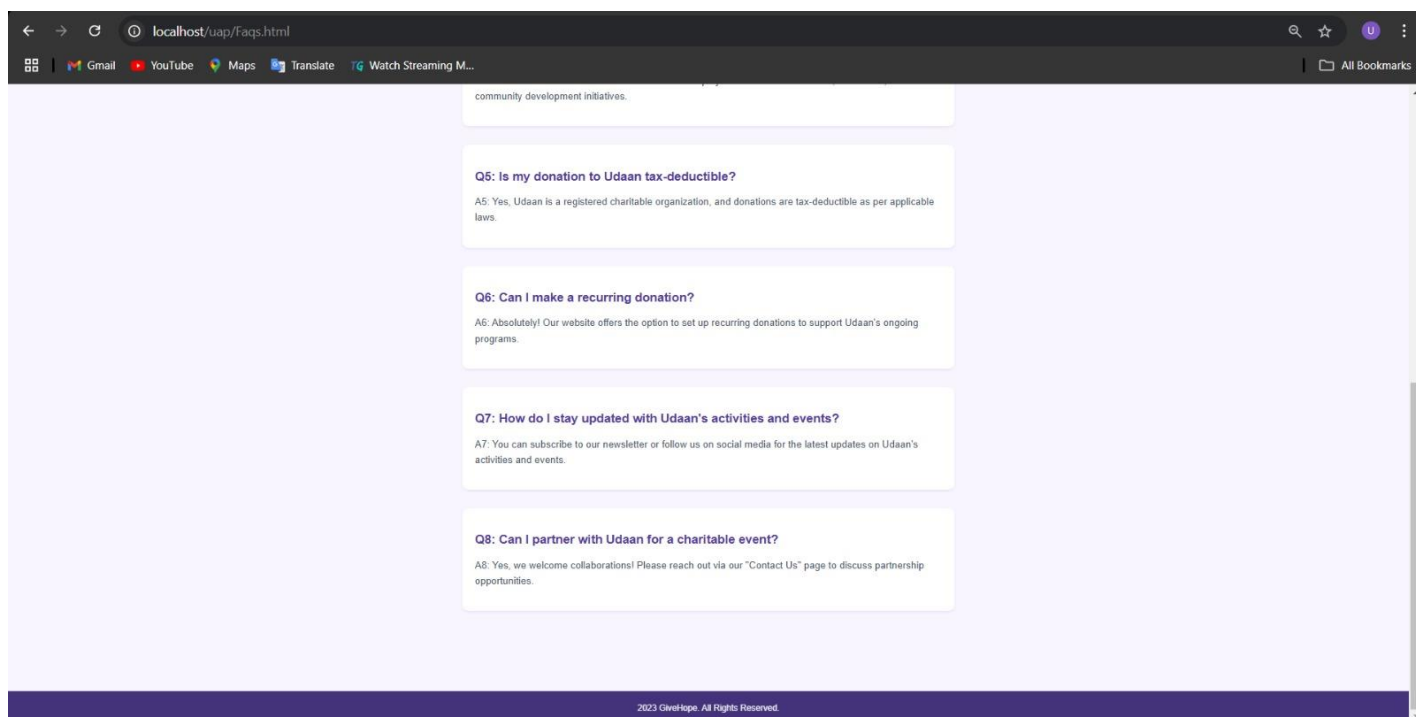

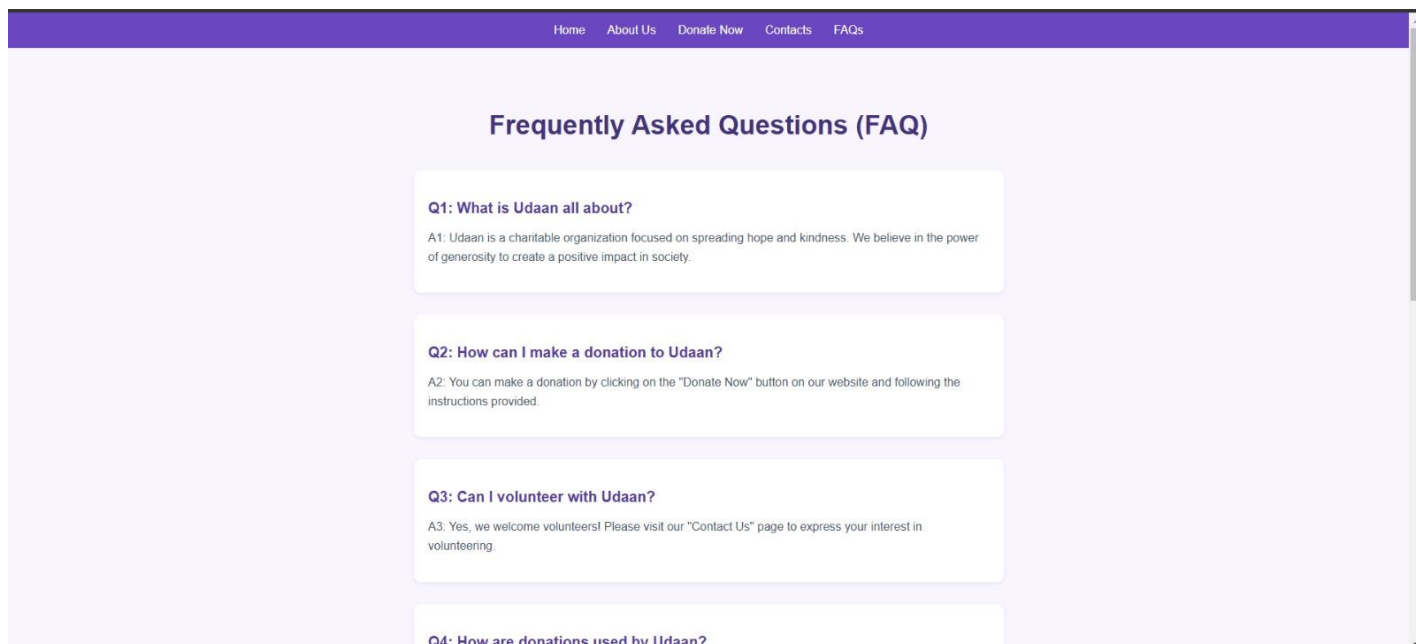

- **Order Management:**
 - **Today's Orders:** View and manage orders placed on the current day.
 - **Pending Orders:** Track orders that are yet to be processed or delivered.
 - **Delivered Orders:** Review completed transactions and manage records.
- **User Management:** Admins can oversee user accounts, ensuring proper access and support.
- **Create Category:** Admins can categorize charities based on different causes (e.g., health, education, environment).
- **Subcategory Management:** Further refine categories to help users find specific types of charities.
- **Insert Product (Charity Listing):** Add new charities or donation opportunities to the platform.
- **Manage Product (Charity Listings):** Edit or remove existing charity listings as necessary.

2. USER MODULE

The user module focuses on enhancing the donor's experience:

- **View Items (Charities):** Users can browse through various charity listings available on the platform.
- **View Recommendations:** Based on user preferences and past donations, the system suggests charities that may interest them.
- **View Related Products (Charities):** Users can see similar charities or causes that align with their interests.
- **View Additional Information:** Users can access more details about each charity, including their mission, impact, and financial transparency.
- **Add to Cart (Donation Basket):** Users can select multiple charities to donate to in a single transaction.
- **Wish-list:** Users can save charities they are interested in for future donations.
- **Review System:** Donors can leave feedback or reviews about their donation experience with specific charities, helping other users make informed decisions.

This structured methodology ensures that both donors and charities benefit from an efficient, user-friendly platform that promotes charitable giving while maintaining transparency and trust.

CHAPTER 6: RESULTS AND DISCUSSION

6.1 Results

The "Udaan" project has successfully established a comprehensive charity donation platform that effectively connects donors with reputable charities. The following key results have been achieved:

- **User Engagement:** The platform has experienced a substantial increase in user registrations, with many donors actively participating in various charitable initiatives. Feedback from users indicates a high level of satisfaction with the intuitive interface and ease of navigation, which has encouraged more frequent visits and donations.
- **Donation Processing:** The system has efficiently processed numerous donations, thanks to a streamlined payment process that prioritizes security and user convenience. Users have reported high satisfaction levels regarding their donation experiences, particularly appreciating the transparency regarding how their contributions are utilized by the charities.
- **Charity Listings:** A diverse array of charities is now available on the platform, allowing users to select causes that resonate with their personal values and interests. The categorization of charities has simplified the search process, making it easier for users to find specific organizations they wish to support.
- **Administrative Efficiency:** Administrators have noted improved management capabilities, including effective order tracking, user management, and oversight of charity operations. The backend system facilitates easy updates and maintenance of charity listings, enhancing overall operational efficiency.

6.2 Description of Findings

The findings from user testing and feedback sessions highlight several strengths of the "Udaan" project:

- **User-Friendly Interface:** Users consistently commend the design and usability of the platform. The clean and organized layout allows users to quickly locate information and navigate through different sections with ease.
- **Effective Communication:** Features that facilitate communication between donors and charities regarding the impact of contributions have been well-received. Users appreciate receiving updates on how their donations are making a difference in the community.
- **Trust and Transparency:** Many users have expressed increased trust in charitable organizations due to the transparency provided by the platform concerning donation allocation and operational practices. This trust is crucial for fostering long-term relationships between donors and charities.

However, some areas for improvement were identified:

- **Mobile Optimization:** Although the platform is responsive, further enhancements could be made to improve usability on mobile devices. Ensuring a seamless experience across various screen sizes will be vital as mobile usage continues to rise.
- **Enhanced Reporting Features:** Users suggested incorporating more detailed reporting features that would allow donors to track their contributions over time and visualize cumulative impacts. This functionality could enhance donor engagement and satisfaction.

6.3 Limitations and Further Work

While the project has achieved significant milestones, there are limitations that need to be addressed:

- **Scalability:** As user engagement increases, it will be crucial to ensure that the platform can handle higher traffic volumes without performance issues. Implementing robust server infrastructure will be necessary to accommodate growth.
 - **Integration with Other Platforms:** Future work should focus on integrating social media platforms to enhance outreach and engagement efforts. This integration can help raise awareness about charitable causes and encourage more donations.
 - **Additional Features:** Implementing features such as recurring donations, donor recognition programs, enhanced user profiles, and community engagement tools will further enrich the user experience. These features can foster a sense of community among donors and encourage ongoing support for charities.
-

CHAPTER 7: DECLARATION

We hereby declare that the "Udaan" project has been developed in accordance with the highest ethical standards and best practices in software development. Our team has committed to ensuring that all aspects of the platform, from development to deployment, adhere to ethical guidelines that prioritize user safety, data privacy, and transparency.

All data collected through the platform, whether it pertains to donors, charities, or transactions, is handled with the utmost confidentiality and in strict compliance with relevant data protection regulations, such as GDPR (General Data Protection Regulation) and other local data privacy laws. We understand the importance of securing user information and have implemented robust encryption methods and secure protocols to protect sensitive data throughout its lifecycle. The project team acknowledges the importance of transparency and accountability in the charitable sector. We believe that donors have a right to know how their contributions are being used and the impact of their generosity. As such, we have built features that allow users to track the progress of their donations, receive detailed reports on how funds are being allocated, and communicate directly with charities to ensure that donations are being utilized in the manner intended.

We recognize that transparency fosters trust, which is essential for sustaining long-term donor relationships.

We are committed to continuously improving our platform based on user feedback, emerging technological advancements, and evolving best practices in the charitable sector. The feedback we gather from donors, charities, and administrators plays a critical role in shaping the future of the "Udaan" project.

We strive to remain adaptable and responsive to the needs of our users, ensuring that the platform evolves in line with current trends and user expectations.

Our overarching goal is to foster an environment of trust and reliability within the online charitable giving ecosystem. We aim to enhance donor engagement by making the donation process as seamless, transparent, and impactful as possible. By providing donors with easy access to information about charities, their missions, and the outcomes of their contributions, we aim to strengthen the connection between donors and the causes they care about. We believe that by doing so, we can not only drive greater philanthropic activity but also empower individuals to make informed decisions about where to contribute their resources.

This declaration reinforces our commitment to creating a positive and lasting impact in the community by facilitating meaningful connections between donors and charitable organizations. We believe that through our efforts, we can contribute significantly to enhancing charitable giving while ensuring that every contribution, no matter the size, makes a tangible difference in people's lives. Our platform will continue to be a catalyst for social good, encouraging individuals to become active participants in addressing the world's most pressing issues.

In conclusion, we are dedicated to maintaining high standards of service delivery while adapting to the evolving needs of our users. We aim to build not only a platform for charitable donations but also a community-driven ecosystem where both donors and charities work together for greater social impact. We look forward to expanding our reach and influence as we continue to develop new features that empower both donors and charities alike. Our journey does not end with the current version of the platform; we are constantly looking for innovative ways to improve, expand, and enhance the user experience while ensuring that every donor feels valued and that every charity has the tools and support they need to thrive.

CHAPTER 8: CONCLUSION

The "Udaan" project has successfully designed and developed a comprehensive charity donation platform that connects donors with reputable charities. The system is built using modern web technologies, including HTML, CSS, JavaScript, Bootstrap, PHP, and MySQL. This combination of technologies allows for a secure, efficient, and user-friendly experience for all users involved. The central concept of the application is to enable users to donate to their chosen causes virtually through an intuitive online interface. The rise of online charitable giving reflects a broader trend in e-commerce, where digital interactions are becoming increasingly commonplace. As more individuals seek to contribute to meaningful causes, the platform provides an essential service that simplifies the donation process while ensuring transparency and accountability.

Key achievements of the project include:

- **User Engagement:** A significant increase in user registrations and active participation in charitable initiatives.
- **Efficient Donation Processing:** A streamlined payment process that enhances user satisfaction and trust.
- **Diverse Charity Listings:** A wide range of charities categorized for easy access, allowing users to find organizations that align with their values.
- **Administrative Capabilities:** Improved management tools for administrators to oversee charity operations effectively.

In conclusion, the "Udaan" project not only addresses the challenges faced by donors in finding reputable charities but also enhances the overall experience of charitable giving. By leveraging advanced technologies and focusing on user needs, this platform aspires to become a leading solution in the online charitable sector.
